AUTHOR INDEX TO VOLUME 19

Issue	Page		
2	171	Agrawal, A.K.	Nonuniform grid generation for boundary-layer problems.
2	272	Anderson, J.	Erratum notice. A plotting package for visually comparing theoretical and experimental results.
2	271	Aziz, R.A.	Erratum notice. Program ACQN to calculate transport collision integrals adapted to run on IBM computers.
2	179	Azumi, M.	Convergence of solutions of the MHD stability code ERATO.
3	359	Balint-Kurti, G.G.	EDWIN: a program for calculating inelastic molecular collision cross sections using the exponential distorted wave and related approximate methods.
2	272	Beckwith, R.C.	Erratum notice. A plotting package for visually comparing theoretical and experimental results.
2	161	Bernard, L.C.	An algorithm to compute the vacuum contribution to the ideal MHD dW in an axisymmetric configuration.
1	17	Bernhardi, K.	An improved deconvolution method for bremsstrahlung spectra from hot plasmas.
3	337	Castiglione, G.	A program to introduce local symmetry in ab initio computations of molecules: IBMOL-7.
3	337	Clementi, E.	A program to introduce local symmetry in ab initio computations of molecules: IBMOL-7.
2	185	Coleman, J.P.	A new fourth-order method for $y'' = g(x)y + r(x)$.
1	43	Comfort, J.R.	Linkage of Fortran programs with partitioned data sets on IBM, CDC and DEC computers.
1	51	Comfort, J.R.	Implementation of the partitioned-data-set concept for CDC computers.
1	103	Crees, M.A.	ASYPCK: a program for calculating asymptotic solutions of the coupled equations of electron collision theory.
1	139	Crees, M.A.	EDITOR: a program for amending files of card images.
1	93	Dragoun, O.	A computer program for determination of nuclear parameters from internal conversion experiments.
2	215	Eastwood, J.W.	P3M3DP: the three dimensional periodic particle-particle/particle-mesh program.
3	359	Eno, L.	EDWIN: a program for calculating inelastic molecular collision cross sections using the exponential distorted wave and related approximate methods.
3	377	Greene, A.E.	Numerical solutions of the Boltzmann transport equation.
2	161	Gruber, R.	An algorithm to compute the vacuum contribution to the ideal MHD dW in an axisymmetric configuration.
2	197	Hlavaty, L.	Nuclear decay scheme construction based on qualitative coincidences.
2	215	Hockney, R.W.	P3M3DP: the three dimensional periodic particle-particle/particle-mesh program.
1	69	Hopkinson, J.F.L.	Calculation of photoemission spectra for surfaces of solids.

Issue	*Page*		
2	205	Ivascu, M.	Folded Yukawa-plus-exponential model PES for nuclei with different charge densities.
1	23	Ixaru, L.Gr.	A Numerov-like scheme for the numerical solution of the Schrodinger equation in the deep continuum spectrum of energies.
1	11	Jackson, C.	The CPC Program Library.
3	273	Killeen, J.	Report of the IAEA consultants' meeting on computer codes for fusion research, 5-7 December 1979, Vienna, Austria.
2	179	Kurita, G.	Convergence of solutions of the MHD stability code ERATO.
2	215	Lawrence, D.N.	P3M3DP: the three dimensional periodic particle-particle/particle-mesh program.
1	29	Leath, P.L.	Growing lattice animals and Monte Carlo methods.
2	263	Malmstrom, G.	A program for calculation of the reflection and transmission of electrons through a surface potential barrier.
2	179	Matsuura, T.	Convergence of solutions of the MHD stability code ERATO.
2	205	Mazilu, D.	Folded Yukawa-plus-exponential model PES for nuclei with different charge densities.
3	299	Miraglia, J.E.	Computational methods for eikonal differential cross sections.
1	63	Moon, W.	Algorithm for the first order hydrostatic ellipticity of a planet.
3	395	Morgan, K.	Erratum notice. An expansion equation of state subroutine.
2	272	Moriarty, K.J.M.	Erratum notice. A plotting package for visually comparing theoretical and experimental results.
2	271	Neufeld, P.D.	Erratum notice. Program ACQN to calculate transport collision integrals adapted to run on IBM computers.
3	327	Noble, C.J.	Subroutines for the evaluation of exchange integrals in the impact parameter formulation of atomic charge transfer collisions.
1	35	Ogata, A.	The number of computers in a non-hierarchical system for tokamak data processing.
3	337	Ortoleva, E.	A program to introduce local symmetry in ab initio computations of molecules: IBMOL-7.
2	171	Peckover, R.S.	Nonuniform grid generation for boundary-layer problems.
1	69	Pendry, J.B.	Calculation of photoemission spectra for surfaces of solids.
3	299	Piacentini, R.D.	Computational methods for eikonal differential cross sections.
2	205	Poenaru, D.N.	Folded Yukawa-plus-exponential model PES for nuclei with different charge densities.
1	29	Reich, G.R.	Growing lattice animals and Monte Carlo methods.
3	305	Ribeiro, C.A.	Method for obtaining small sets of pseudo random numbers with uniform distribution.
3	299	Rivarola, R.D.	Computational methods for eikonal differential cross sections.
1	23	Rizea, M.	A Numerov-like scheme for the numerical solution of the Schrodinger equation in the deep continuum spectrum of energies.
1	vii	Roberts, K.V.	Editorial.

Issue	*Page*		
3	377	Rockwood, S.D.	Numerical solutions of the Boltzmann transport equation.
2	263	Rundgren, J.	A program for calculation of the reflection and transmission of electrons through a surface potential barrier.
1	93	Rysavy, M.	A computer program for determination of nuclear parameters from internal conversion experiments.
3	359	Saktreger, R.	EDWIN: a program for calculating inelastic molecular collision cross sections using the exponential distorted wave and related approximate methods.
3	293	Saunders, V.R.	Diagrammatic many-body perturbation expansion for atoms and molecules: V. Fourth-order linked diagrams involving triply-excited states.
3	309	Schmidt, H.U.	MHD-calculations for cometary plasmas.
2	272	Tabor, J.H.	Erratum notice. A plotting package for visually comparing theoretical and experimental results.
2	179	Takeda, T.	Convergence of solutions of the MHD stability code ERATO.
1	69	Titterington, D.J.	Calculation of photoemission spectra for surfaces of solids.
2	161	Troyon, F.	An algorithm to compute the vacuum contribution to the ideal MHD dW in an axisymmetric configuration.
2	179	Tsunematsu, T.	Convergence of solutions of the MHD stability code ERATO.
3	359	Van Lenthe, J.H.	EDWIN: a program for calculating inelastic molecular collision cross sections using the exponential distorted wave and related approximate methods.
3	309	Wegmann, R.	MHD-calculations for cometary plasmas.
3	293	Wilson, S.	Diagrammatic many-body perturbation expansion for atoms and molecules: V. Fourth-order linked diagrams involving triply-excited states.
1	35	Yuasa, K.	The number of computers in a non-hierarchical system for tokamak data processing.

PROGRAM INDEX TO VOLUME 19

Astrophysics

Issue	*Page*	*Cat.no.*	
2	215	ABVA	P3M3DP (Fortran). P3M3DP: the three dimensional periodic particle-particle/particle-mesh program. J.W. Eastwood, R.W. Hockney and D.N. Lawrence. Subroutines required by this program are ABUA 2(1971)127, ABUF 7(1974)245.

Atomic Physics

1	93	ABGS	CFIT (Fortran). A computer program for determination of nuclear parameters from internal conversion experiments. M. Rysavy and O. Dragoun.
1	103	AAJA	ASYPCK (Fortran). ASYPCK: a program for calculating asymptotic solutions of the coupled equations of electron collision theory. M.A. Crees. Subroutine required by this program is AAJB 19(1980)103.
1	103	AAJB	ASYPRO (Fortran). Preprocessor for ASYPCK: a program for calculating asymptotic solutions of the coupled equations of electron collision theory. M.A. Crees.
2	271	ACQN	A00ACORRECTION TO 0001 31/01/80 (Fortran). Program ACQN to calculate transport collision integrals adapted to run on IBM computers. P.D. Neufeld and R.A. Aziz.
3	327	ACZU	IPEXMAT (Fortran). Subroutines for the evaluation of exchange integrals in the impact parameter formulation of atomic charge transfer collisions. C.J. Noble. Subroutine required by this program (for data) is ACZV 19(1980)327.
3	327	ACZV	REXMAT (Reduce2). Subroutines for the evaluation of exchange integrals in the impact parameter formulation of atomic charge transfer collisions. C.J. Noble.
3	359	AAJC	EDWIN (Fortran). EDWIN: a program for calculating inelastic molecular collision cross sections using the exponential distorted wave and related approximate methods. G.G. Balint-Kurti, J.H. van Lenthe, R. Saktreger and L. Eno.

Fluid and Gas Dynamics

2	271	ACQN	A00ACORRECTION TO 0001 31/01/80 (Fortran). Program ACQN to calculate transport collision integrals adapted to run on IBM computers. P.D. Neufeld and R.A. Aziz.
3	377	ABVC	NOMAD (Fortran). Numerical solutions of the Boltzmann transport equation. S.D. Rockwood and A.E. Greene.
3	395	ACSA	000A CORRECTION 21/09/79 (Fortran). An expansion equation of state subroutine. K. Morgan.

General Purpose

1 51 ACZQ CDC PARTITIONED DATA SETS (Fortran, Compass). Implementation of the partitioned-data-set concept for CDC computers. J.R. Comfort.

1 139 ACZZ EDITOR (Fortran). EDITOR: a program for amending files of card images. M.A. Crees.

2 272 AAUN A00ACORRECTION TO 0001 04/02/80 (Fortran). A plotting package for visually comparing theoretical and experimental results. J. Anderson, R.C. Beckwith, K.J.M. Moriarty and J.H. Tabor.

Geophysics

1 63 ACZT HYDELP (Fortran). Algorithm for the first order hydrostatic ellipticity of a planet. W. Moon.

Laser Physics

3 377 ABVC NOMAD (Fortran). Numerical solutions of the Boltzmann transport equation. S.D. Rockwood and A.E. Greene.

Molecular Physics

2 215 ABVA P3M3DP (Fortran). P3M3DP: the three dimensional periodic particle-particle/particle-mesh program. J.W. Eastwood, R.W. Hockney and D.N. Lawrence. Subroutines required by this program are ABUA 2(1971)127, ABUF 7(1974)245.

2 271 ACQN A00ACORRECTION TO 0001 31/01/80 (Fortran). Program ACQN to calculate transport collision integrals adapted to run on IBM computers. P.D. Neufeld and R.A. Aziz.

3 337 ACYY IBMOL-7 (Fortran). A program to introduce local symmetry in ab initio computations of molecules: IBMOL-7. E. Ortoleva, G. Castiglione and E. Clementi.

3 359 AAJC EDWIN (Fortran). EDWIN: a program for calculating inelastic molecular collision cross sections using the exponential distorted wave and related approximate methods. G.G. Balint-Kurti, J.H. van Lenthe, R. Saktreger and L. Eno.

Nuclear Physics

1 93 ABGS CFIT (Fortran). A computer program for determination of nuclear parameters from internal conversion experiments. M. Rysavy and O. Dragoun.

2 197 AAPB SMUDLA (Fortran). Nuclear decay scheme construction based on qualitative coincidences. L. Hlavaty.

2 205 ABQH FYPEDIFC (Fortran). Folded Yukawa-plus-exponential model PES for nuclei with different charge densities. D.N. Poenaru, M. Ivascu and D. Mazilu.

Plasma Physics

2 215 ABVA P3M3DP (Fortran). P3M3DP: the three dimensional periodic particle-particle/particle-mesh program. J.W. Eastwood, R.W. Hockney and D.N. Lawrence. Subroutines required by this program are ABUA 2(1971)127, ABUF 7(1974)245.

Quantum Chemistry

3	337	ACYY	IBMOL-7 (Fortran). A program to introduce local symmetry in ab initio computations of molecules: IBMOL-7. E. Ortoleva, G. Castiglione and E. Clementi.

Solid State Physics

1	69	ACZY	PEOVER1 (Fortran). Calculation of photoemission spectra for surfaces of solids. J.F.L. Hopkinson, J.B. Pendry and D.J. Titterington.
2	263	ACKR	ELECTRONS REFLECTED BY SURFACE (Fortran). A program for calculation of the reflection and transmission of electrons through a surface potential barrier. G. Malmstrom and J. Rundgren.
